Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to viral vectors and methods for producing transgenic plants that express heterologous DNA that encode a ruminant lysozyme, preferably bovine. This lysozyme protects against diseases caused by plant pathogens particularly bacterial pathogens. The method is useful for producing bovine lysozyme in host plants e.g. grapevines. Plasmid encoding a recombinant plant virus which comprises a bovine lysozyme encoding nucleic acid, is useful for producing bovine lysozyme to a plant. It is also useful for producing bovine lysozyme protein which acts as an anti-Xylella reagent for development of a recombinant source of Bollys protein for treating grapevines against Plerce's disease (PD). The method is useful for protecting grapevines against Xylella fastidiosa bacterium infection that causes pD. The present sequence is bovine lysozyme DNA.
               Sequence encoding bovine lysosyme c2

                                                                                                                                                                                                                                                                                                                                                                  The invention relates to viral vectors and methods for producing transgenic plants that express heterologous DNA that encode a ruminant lysozyme, preferably bovine. This lysozyme protects against diseases caused by plant pathogens particularly bacterial pathogens. The method is useful for producing bovine lysozyme in host plants e.g. grapevines. Plasmid encoding a recombinant plant virus which comprises a bovine lysozyme encoding nucleic acid, is useful for producing bovine lysozyme encoding nucleic acid, is useful for producing bovine lysozyme in a plant. It is also useful for producing bovine lysozyme recombinant source of BoLys protein for treating grapevines against sierce's disease (PD). The method is useful for protecting grapevines against xylella fastidiosa bacterium infection that causes PD. The present sequence is p1044-BoLys plasmid DNA containing bovine lysozyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Chimeric - Bos sp.

                 This sequence encodes the bovine lysozyme c2 and can be used in the transgenic plant of the invention. The transgenic plant is resistant to plant pathogens and contains heterologous DNA encoding a ruminant or ruminant-like lysozyme, the plant expresses sufficient levels of the lysozyme to render it less susceptible to the pathogens than the wild-type plant. The plants are resistant to bacterial pathogens such as Pseudomonas syringae or Erwinia carotovora.

```

```
The 3'-noncoding sequence does not contain a polyadenylation signal or a poly (A)+ tail. The 5'-terminus does not contain the ATG triplet corresponding to the translation initiation codon fo the pre-lysozyme C2 mRNA. Thus the cDNA insert encodes 16 amino acids amino-terminal to the amino-terminus of the mature protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Prodn. of animal lysozyme - consists of P. pastoris for transcription

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 greater stability. The lysozyme may be applied directly to treat or protect plants such as potatoes, tobacco, tomatos, carrots, apples, sunflowers, petunias and violets from plant pathogens such as Pseudomonas, Agrobacterium, Xanthomonas, Erwinia and Clavibacter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence encodes bovine lysozyme c. This sequence was used in the production of transgenic plants that lare resistant to pathogens. The lysozyme encoded by this sequence has a greater ability to lyse gram negative bacteria than hen egg white lysozyme and also has a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Protection of plants against plant pathogens - by transformawith DNA encoding a ruminant or ruminantilike lysozyme, esp. bovine lysozyme C

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A cDNA bank was constructed using total RNA isolated from the human lymphoma cell line U-937. The bank was tested by hybridising with two radio-labeled 17-mer oligonucleotides (equiv. to the AA sequences 26-31 and 63-68 of HLZ). Clones isolated were designated pHI 14-1; pHI21 and pHI 23 (contg. an approx. 500 bp insert) and pHL8 (contg. a 300 bp insert).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New hybrid plasmids contg. sequences for human lysozyme - \circ e.g. as antiviral and antibacterial agent, and transformed

Apart from the four N-terminal amino acids, it encodes the entire sequence of human pre-lysozyme C of placental origin in addition to a translational stop signal. The mature lysozyme C corresponding to the pre-lysozyme C encoded by AAN92054 has the same AA sequence as human milk lysozyme. AN92054 differs from the nucleotide sequence of the cDNAs encoding human pre-lysozyme C isolated from human histlocytic lymphoma cell line U-937 (see FT tags a and b). However, these nucleic acid differences do not alter the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Prodn. of animal lysozyme - consists of P. pastoris for transcription

                                                                                                                                                                                                                                    A cDNA bank was constructed using total RNA isolated from the human lymphoma cell line U-937. The bank was tested by hybridising with two radio-labeled 17-mer oligonucleotides (equiv. to the AA sequences 26-31 and 63-68 of HLZ). Clones isolated were designated pHL 14-1; pHL21 and pHL 23 (contg. an approx. 500 bp insert) and pHL2 and pHL8 (contg. a 300 bp insert).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAN70943;

```

ABL36412 to ABL38645 represent human colon tumour antigen cDNA clones (I) which were isolated from human colon tumour and colon metastatic tumour cDNA libraries. (I) have cytostatic activity and can be used in vaccine production. (I) can be used for stimulating and/or expanding T cells specific for a tumour protein on contact with the T cells. They are also useful for inhibiting the development of cancer in a patient. (I) can be used as probes or primers for nucleic acid hybridisation, for preparing mutant species primers, or primers for use in genetic constructions. (I) can be used in the diagnosis of a colon tumour. Sequence 481 BP; 127 A; 93 C; 128 G; 131 T; 2 other; 6.8%; Score 30; Pred. No. DB 24; 1.6e-05; Length 481;

The bank was tested by hybridising with two radio-labeled 17-mer oligonucleotides (equiv. to the AA sequences 26-31 and 63-68 of HLZ). Clones isolated were designated pHL 14-1; pHL21 and pHL 23 (contg. an approx. 500 bp insert) and pHL8 (contg. a 300 bp insert).

                          This sequence represents a human nucleotide sequence which is differentially expressed in colon cancer cells compared to the expression levels in normal cells. The nucleotide sequence can be used as a source of primers and probes. The nucleotide sequence is useful for determining the phenotype of a cell by detecting the differential expression of the sequence relative to a normal cell. The probes derived from the sequence can also be used to determine the phenotype of cells in a sample. Probes and antibodies which hybridise to the nucleotide sequence can also be used to determine the phenotype of cells in a sample for detecting a mutation in a test nucleotide sequence and also for detecting cancer, preferably colon cancer. Antibodies against the protein encoded by the nucleotide sequence can also be used in a method to detect colon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Endege WO,

(I) have cytostatic activity and can be used in vaccine production. (I) can be used for stimulating and/or expanding T cells specific for a tumour protein on contact with the T cells. They are also useful for inhibiting the development of cancer in a patient. (I) can be used as probes or primers for nucleic acid hybridisation, for preparing mutant species primers, or primers for use in genetic constructions. (I) can be used in the diagnosis of a colon tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 16; Page 263; 345pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel nucleic acids and proteins for identifying therapeutic agents useful for treating and diagnosing cancer, especially colon cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2000-256641/22.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SX S
                                                                                                                                                                                                                                                                                       ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially cexpressed in cancer tissues. ABB78993 to ABB79004 represent proteins cencoded by the ABQ60786 to ABQ60787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide concoded by (I) is useful for detecting cancer in a patient sample, and concoded by (I) is useful for detecting cancer in a patient sample, and concoded by a presence or absence of a polypucleotide encoded by a nucleic acid which hybridises to (I) in a cell. A probe/primer derived concoded to the presence of a nucleic acid which concoded concoded to the presence of a nucleic acid which concoded concoded to the presence of a nucleic acid which concoded concoded to the presence of a nucleic acid which concoded to the presence of t
